

Extended Character Keystrokes For Macs

Finding that special character can often be a pain, so here's a nifty guide for keystrokes you need on Mac operating systems. (I think these all work below Mac OS X as well.)

Alt is also the Option key.

Alt + a: å

Some symbols are harder to get, so you may copy these ones from here if you need them:

¼ ½ ¾ ý Y × ¹ º ³ Þ þ ð

If there are any extra symbols you know of that are pretty much standard between fonts, let me know, and I'll add those to here as well. I may've overlooked some.

Be sure to check out my Windows extended characters guide also. :-)
